ICOR Launches New Online Virtual Training Center

Indianapolis, Indiana

On January 12th, 2009 ICOR International, Inc. launched its new Virtual Training Center (VTC), at <http://icorinternational.com/training>, to provide refrigerant users with web based access to their popular training programs.

"For most technicians making it to a training program or association meeting after a long hard day at work can be difficult to impossible", said ICOR VP Gordon McKinney. "Now refrigerant users world wide can access our programs 24/7/365 and stay ahead of the curve on their own schedule."

The initial program offered on the new VTC is "The Future of R-22 System Service". This program details the R-22 phase out challenge and gamut of compliance strategies available. Along with covering critical conversion considerations such as recording pre and post conversion performance data, component compatibility, leak testing, proper vacuum, etc, the program also describes the complete system conversion guidelines for NU-22B and ONE SHOT.

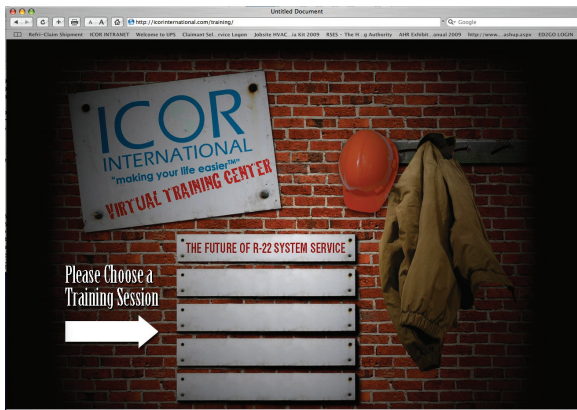

By February ICOR will have two additional training programs available at their VTC site. "The Three R's of Refrigeration" focuses on the ever changing refrigerant recovery, recycle, and reclamation industries. And "The Move to HFC's" takes a comprehensive look at the HCFC phase out and the entire array of HFC options available.

When a VTC visitor has completed an online course they will be able to submit their contact information and receive a Certificate of Completion via email for their file.

ICOR International, Inc. has been a leader in refrigerant user education since 1995 and all of its programs are NATE certified. Individuals who are capable of attending a live ICOR training presentation receive two NATE credit hours per program. To organize a live training program in your area, call ICOR at 800-497-6085 or email icorinfo@icorinternational.com.

ICOR International, Inc. produces, packages, and distributes an array of popular refrigerants including HOT SHOT® (R-414B), R-422B (NU-22B®), R-422C (ONE SHOT®-C), R-401A, R-401B, R-22, R-134a, R-407A, and R-407C. AND COMING SOON in late 2009 R-410A.
